Proposed USF System Policy

Number: 6-031  
Subject: Bloodborne Pathogens (BBP)

I. INTRODUCTION (Purpose and Intent)

The University of South Florida System (USF System) is committed to providing a safe and healthful work environment for our faculty, staff and volunteers. In support of this goal, the USF System is committed to developing and implementing health and safety programs for the benefit of its faculty, staff and volunteers. The purpose of this policy is to reduce workplace exposure to blood and other potentially infectious materials (OPIM) to prevent the transmission of human bloodborne pathogens (BBP) such as human immunodeficiency virus (HIV), hepatitis B virus and hepatitis C virus. The policy is based upon OSHA standard 29 CFR 1910.1030, “Occupational Exposure to Bloodborne Pathogens.” The Division of Environmental Health and Safety will oversee the implementation of this policy.

This policy is applicable to all USF System faculty, staff and volunteers who have the potential for occupational exposure to bloodborne pathogens with the exception of employees, faculty, staff and volunteers at USF Health, who must comply with the USF Health Exposure Control Plan. Faculty, staff or volunteers with potential BBP exposure may include clinical staff, research personnel/assistants, custodial services staff, law enforcement officers, athletic trainers, and staff charged with administering first aid.

II. STATEMENT OF POLICY

The USF System’s Bloodborne Pathogens Exposure Control Plan (ECP) serves as the standard for all faculty, staff and volunteers who may come into contact with blood and other potentially...
infectious material while performing their duties. All USF System faculty, staff and volunteers are required to comply with the provisions of the ECP. The ECP is available for review in COMPASS, “USF System Exposure Control Plan.”

The ECP focuses on the implementation of standard precautions, which effectively reduce and protect against exposure to blood and body fluids that may contain bloodborne pathogens including Hepatitis B Virus (HBV) and Human Immunodeficiency Virus (HIV). The ECP addresses the following topics:

- Exposure determination
- Engineering and work practice controls
- Personal protective equipment
- Housekeeping
- Management of regulated waste
- Training requirements
- Vaccination
- Post-exposure evaluation
- Recordkeeping

III. CONSEQUENCES

Any USF System faculty, staff or volunteer who fails to follow the provisions of this policy or the USF System Exposure Control Plan may be subject to disciplinary actions as allowed under the policies and procedures of the Division of Human Resources.
IV. EXCEPTIONS

USF System faculty, staff or volunteers working in or at USF Health must comply with the USF Health Exposure Control Plan while working in or at USF Health.

Sandy Lovins, Vice President for Administrative Services
Judy Genshaft, President
